Arize
CANTATA HEALTH SOLUTIONS

Empowering CCBHCs with Specialized EHR Solutions

Cantata's Arize EHR meets the rigorous requirements of Certified Community Behavioral Health Clinics (CCBHCs).
CCBHCs are making a significant impact on people who receive care. With Arize EHR, they can continue to drive positive outcomes* while meeting federal standards and addressing the needs of underserved communities.

Arize EHR offers integrated tools that empower providers to expand access to care, improve treatment outcomes, and enhance community support. This helps CCBHCs in their efforts to provide a higher level of coordinated and integrated care, meet specific federal and state regulations, and manage the complexities of diverse billing models, all while maintaining high standards of patient care and data security.

Benefits of Implementing Arize EHR for CCBHCs

- Improve patient outcomes by facilitating coordinated care.
- Expand access to care for underserved populations via built-in telehealth.
- Enhance client engagement with integrated tools that lead to greater adherence to treatment and integration of care.
- Compliance with federal quality measures ensuring high standards of care.
- Financial sustainability through efficient billing management.

CCBHC Checklist for Success

Integrated Care Coordination:

Arize provides comprehensive tools for seamless communication across multi-disciplinary teams, which is essential for the integrated care model of CCBHCs. This includes secure exchanges of clinical data not just within behavioral health services but extending to primary care physicians and other health service providers.

24/7 Crisis Services Support:

Arize includes built-in functionality to support 24/7 crisis intervention services, including access to the system for external partners, coordinating with mobile crisis teams and communicating with first responders to ensure timely interventions, which is a mandatory requirement for CCBHCs.

Specialized Billing and Revenue Cycle Management:

Arize is tailored to handle the complex billing requirements specific to CCBHCs, including Prospective Payment System (PPS) arrangements. This facilitates the comprehensive coordination of billing across Medicare, private insurance, and Medicaid, which is critical for CCBHCs due to their diverse funding sources.

Compliance with Federal and State Reporting Requirements:

Arize makes it easy to collect federally mandated CCBHC quality measures by integrating them into clinical workflows. Pre-built reports are provided to help clinics stay compliant with minimal manual effort. This is essential for CCBHCs, which are subject to stringent reporting and performance metrics.

Telehealth Capabilities:

Arize includes fully integrated telehealth built for behavioral health workflows that are not available in standalone solutions and minimize compliance risks. This enables providers to offer services remotely, expanding access to care for rural or underserved populations—a key goal for CCBHCs.

Interoperability Standards:

Based on SAMHSA standards, Arize ensures that CCBHCs can easily share data with external health and human services organizations, labs, and public health entities through Summary of Care documents. This fosters collaboration and enhances patient outcomes by ensuring all health providers have access to the same comprehensive data.

Integrated Screening and Assessment Tools:

Arize embeds tools like the PHQ-9 and Columbia Suicide Risk Assessment directly within clinical workflows, as well as tracks clinical measures such as BMI or tobacco use. This integration is vital for the comprehensive screening and assessment services CCBHCs are required to provide.

Reporting for Outcomes and Improvements:

Automated reporting for outcome measures allows CCBHCs to track patient progress, client satisfaction, and quality improvement initiatives, helping providers deliver better care and achieve compliance with federal outcome tracking requirements.
